Chameleon Viewer (Registered User): User Story

Chameleon is a tech start-up, managed and run by Deakin University students in their final year of study. Chameleon's mission is to research, create, test, document and deploy IoT-based solutions to enhance life through the application of smart city technologies including the building of smarter cities, homes, transportation, and energy management systems.

The Chameleon Website Project aims to develop a centralised multifunctional platform that not only promotes the company to external parties but also supports and engages the internal workforce, ensuring they have the tools and experience needed to succeed in their roles. This user story from David, a 30-year-old data scientist who wants to sign up for the Chameleon website, explains how he can use the website, download resources and comment on the content.

User Story:

As a registered user, I expect a personalized browsing experience that allows me unrestricted access to Chameleon's content, helping me to stay informed on the latest in smart city advancements.

Acceptance Criteria:

Personalized interface: A dynamic homepage that tailors content based on my interests.

Unlimited access: The ability to view all available content without restrictions.

Interactive engagement: Options to comment and engage with news, insights, and resources.

Resource downloading: Ability and easy access to download valuable information such as data sets, and the most recent data science-related algorithms and programs.
